

PROGRAMA DE ACCIÓN PARA LA CONSERVACIÓN DE LA ESPECIE (PACE): CÓNDOR DE CALIFORNIA

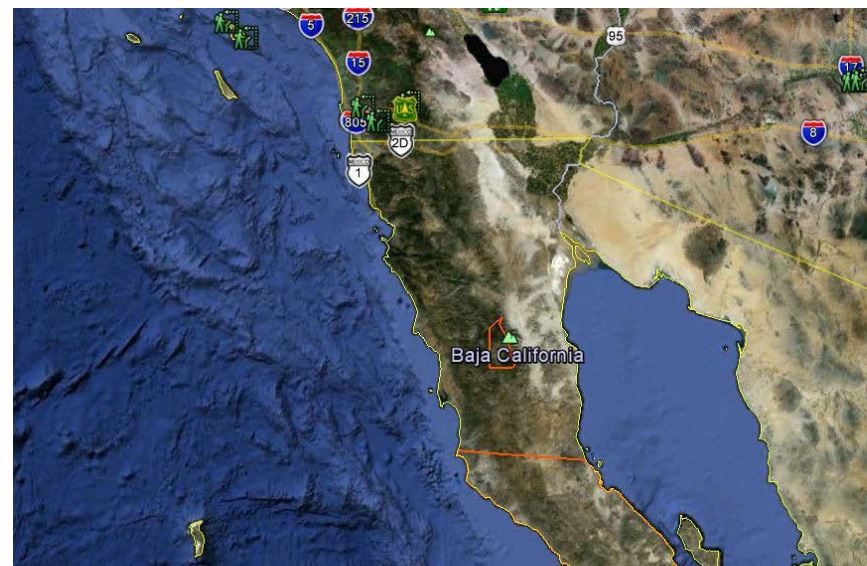

California Condor Recovery Program goals:

- Three populations with 450 individuals: Two wildlife populations (California/Baja California and Arizona) and one captive population.
- Each population requires at least 15 breeding pairs.
- Sustainable populations.
- The number of births must be higher than the number of deaths per year.

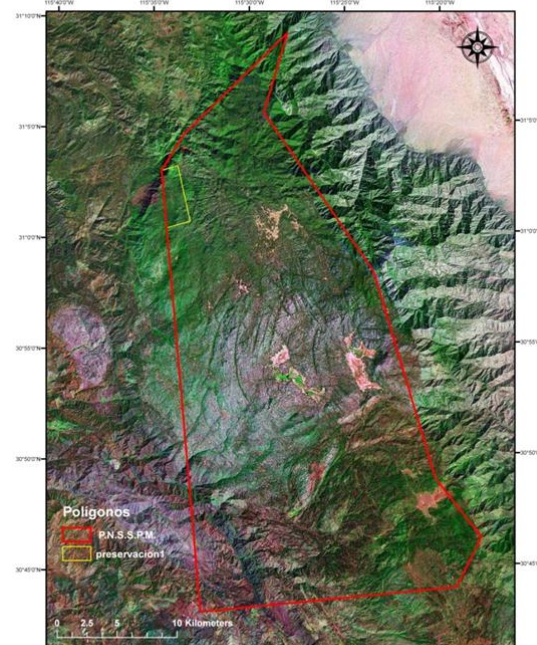

Parque Nacional Sierra de San Pedro Mártir (PNSSPM)

- National Park (Federal PA, coadministrated with State)
- 72,910.68 hectares
- Located at the north of Península de Baja California, at the center of the State
- 170Km southward Ensenada city, Baja California
- Located in the mountain region known as San Pedro Mártir, the highest orographic complex of the peninsula
- Punta Colonet, in Ensenada municipality

Supported actions by PACE 20123

- Monitoring with conventional radio telemetry VHF (Very High Frequency).

- Behavior and feeding habits observations.
- Health and breeding monitoring.

Risk identification and mitigation:

- Eolic-electrical plants
- Lead (Pb) intoxication
- Transmissions lines power

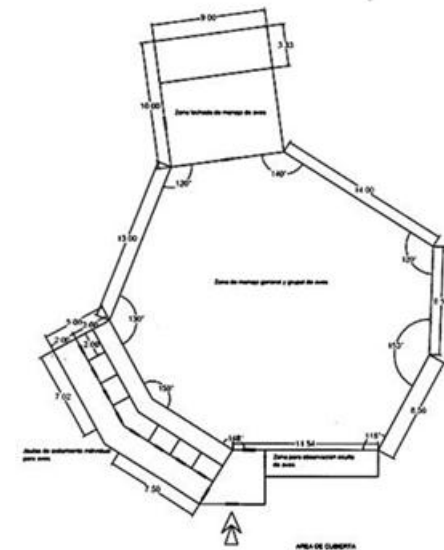

Infrastructure:

- Clinic and laboratory:
 - California condors care
 - Health analysis
 - Isolation
 - Management
 - Captivity

- Electric energy for the clinic is provided by solar pannels

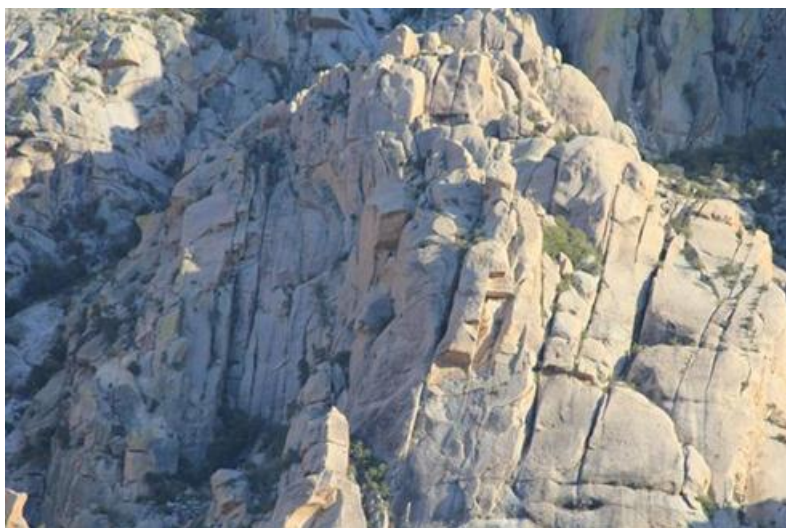

- A new aviary is planned to be constructed in 2013

Current population:

- In the Sierra de San Pedro Mártir exists:
 - 27 individuals in the wild
 - 2 individuals in captivity
- Additionally, in 2012 breeding season, two condor chicks were born in wildlife. They are still in the wild.

31 CALIFORNIA CONDORS IN THE SIERRA DE SAN PEDRO MÁRTIR
